

Serial No.: 10/690,460    Amendment to Claims  
Art Unit: 3635

Claims 1-14. Cancelled)

15.(Currently Amended) A stucco wall structure for a building,  
comprising:

a wall substrate arranged for receipt of subsequent layers of  
surface material;

a peripheral screed arrangement disposed on said wall substrate  
to provide dimensional and finish guidance to subsequent layers of  
material of said wall structure;

a sprayed-on coating of urethane foam onto said wall substrate  
to insure continuous bonding and adherency to ~~between~~ said substrate  
and said urethane;

a first irregularly surfaced layer of polymer-based base coat and  
mesh covering said sprayed-on coating of urethane to provide  
anchoring and adhesion of a subsequent layer of material; and

~~an~~ a screed-guidable vacuum-planeable outer layer of stucco  
applied over said first layer of polymer-based base coat as a final coat  
thereon[;], wherein said sprayed-on coating of foam is thicker than

Serial No.: 10/690,460     Amendment to Claims

Art Unit: 3635

said screed ~~for~~ to permit proper subsequent trimming thereof by a vacuum planer to a desired finished thickness.

16. (Original) The stucco wall structure as recited in claim 15, wherein said first layer of polymer-based base coat and mesh is about 1/8 inch thick.
17. (Original) The stucco wall structure as recited in claim 15, wherein said final layer of stucco is about 1/4 inch thick.
18. (Original) The wall structure as recited in claim 15, wherein said wall structure has a peripheral margin and an opening margin, wherein a screed is placed around said margin to facilitate interlocking said sprayed-on foam thereto.
19. (Original) The wall structure as recited in claim 15, wherein said screed is of "L" shape in cross-section.
20. (Original) The wall structure as recited in claim 15, wherein said screed is of "J" shape in cross-section.

21. (Original) The wall structure as recited in claim 15, wherein said outer layer of stucco is comprised of a thin sheet of brick face.

22. (Currently Amended) A method of insulating and finishing a vertical wall structure which is impervious to water, comprising the steps of:

cleaning a surface of said wall structure to be treated;

applying a plane-guiding screed arrangement having a certain thickness, to the peripheral margins of said surface of said wall to be treated;

spraying a urethane foam directly onto said surface of said wall structure defined within said screed arrangement;

applying a first irregularly-surfaced coat of polymer enhanced base coat and mesh onto said sprayed-on coat of urethane foam; ~~and~~

vacuum planning said sprayed-on coat of urethane foam with an elongated vacuum planer prior to application of said first coat of polymer-based base coat and mesh to said thickness of said screed;  
and

applying a stucco finish material onto said sprayed layer of urethane foam and said first coat of polymer-based base coat and mesh beyond said thickness of said screed.

23. (Original) The method as recited in claim 22, including the step of:

vacuum planning said sprayed-on coat of urethane foam with an elongated vacuum planer prior to application of said first coat of polymer-based base coat and mesh to said thickness of said screed.

24. (Original) The method as recited in claim 22, including the step of:

guiding said vacuum planer at one end thereof, by riding said planer on said screed, to facilitate the proper thickness planning of said urethane foam.
